

Table 2. Most Limiting Manure Application Rates for Non-Tiled Fields.

<b>Select the Most Limiting Application Rate Based on the Following Criteria</b>					
Field Situation & Time of Year	Limiting Application Rate Criteria				
	Nitrogen	P2O5 <sup>4/</sup>	K2O	Tons/Ac Gallons/Ac	AWC Table
<b>Non Subsurface Drained (Tiled) Fields</b>					
(July - Sept.) Not Subsurface Drained	1/ Crop Needs factoring N losses	Crop Needs or Crop Removal < 250 Lbs/ac	Crop Needs or Crop Removal < 500 Lbs/ac		Upper 8"

1/ Crop Needs factoring N losses - Maximum total nitrogen applied to meet the succeeding crop's recommended NITROGEN requirements for non-legume crops or 150 lbs/ac NITROGEN for the succeeding legume crop. <b>Considers loss of N through application method and time of year.</b>					
2/ 50 lbs/ac as applied N - Nitrogen application limited to 50 lbs/ac based on the addition of the NH4 or NH3 (ammonium/ammonia) content of the manure + 1/3 of the organic nitrogen content the manure as applied. <b>Considers no losses due to application method or time of year.</b>					
3/ Next year's crop needs as applied N - Maximum total nitrogen applied to meet the succeeding crop's recommended NITROGEN requirements for non-legume crops or 150 lbs/ac NITROGEN for the succeeding legume crop. <b>Considers no losses due to application method or time of year.</b>					
4/ Under special conditions and criteria the rate of P2O5 application can be increased to 500 lbs./acre (See Appendix A or rule 901:10-2-14). <b>Frozen or Snow covered ground and fields over 100 ppm Bray P1 soil test are exempt and are always limited to applications less than or equal to 250 lb/ac P<sub>2</sub>O<sub>5</sub>.</b>					
5/ Wet tons refers to the weight of the manure as it is applied - include solids and moisture weight.
